made from rye grains, has been gaining attention as a potential climate-smart meal option for schools. A Swedish research study published in 2025 investigated the effects of ris-based meals on the iron levels in children. The study found that while the ris-based meals helped reduce carbon emissions, they also led to lower iron levels in the children. The researchers attribute the decrease in iron levels to the lower iron content in the ris compared to traditional meat-based meals. Iron is essential for healthy growth and development in children, and maintaining adequate iron levels is crucial. The findings of the study have significant implications for schools looking to incorporate climate-smart meal options into their menus. While ris-based meals may be a good choice for the environment, schools need to consider the nutritional consequences of these meals on the children. Iron-fortified ris-based meals could be a potential solution to address the issue of lower iron levels in children.
